Strip/Clamp-On Heaters

Strip/Clamp-On Heaters

Mineral Insulated (MI) Strip Heaters

The MI strip heater is a thin, responsive heater that uses the most advanced heater construction techniques. A nickel-chromium element wire is embedded in Watlow's exclusive mineral insulation material, which has a much higher thermal conductivity than the mica and hard ceramic insulators used in conventional heaters. This thin layer of insulation brings the element wire closer to the heater sheath. The result is heat flows easily from the element wire to the sheath allowing the wire to run cooler than conventional heaters and increasing heater life.

Performance Capabilities

- Sheath temperatures up to 1400°F (760°C)
- Watt densities up to 140 W/in² (21.7 W/cm²)
- Maximum voltage up to 480VAC
- UL® component recognition for most 240VAC or less designs (UL® File #E52951)

Features and Benefits

Higher watt densities than any other strip heater

- Provides faster heat up

Exclusive mineral insulation

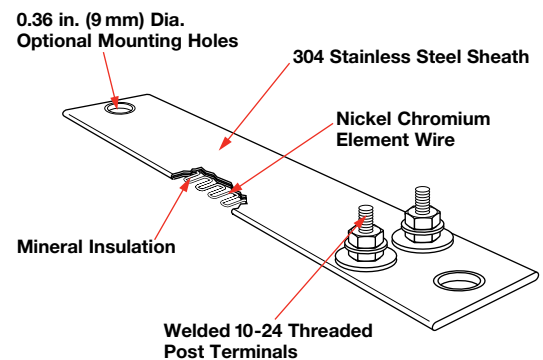

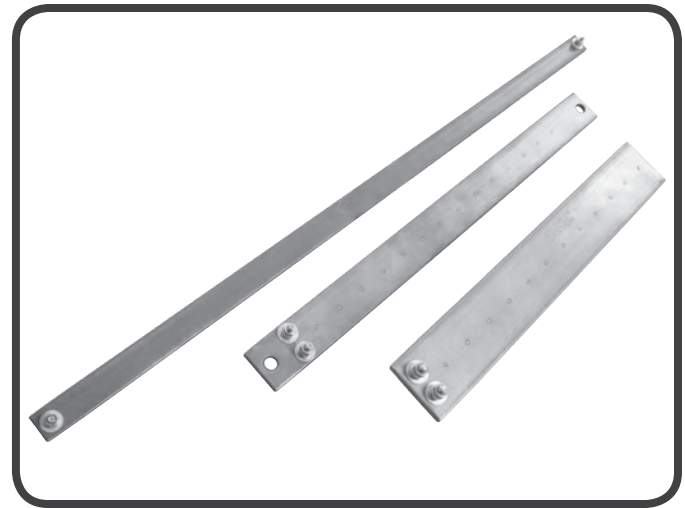

- Combines dielectric strength and superior thermal conductivity
- Transfers heat rapidly to the sheath

304 stainless steel sheath

- Maintains the high compaction of mineral insulation
- Produces a rigid heater

Typical Applications

- Solder pots
- Zinc die-casting equipment
- Die and mold heating
- High-temperature resins
- Tank and platen heating
- Ovens
- Packaging equipment
- Semiconductor chamber heating

Strip/Clamp-On Heaters

Mineral Insulated (MI) Strip Heaters

Applications and Technical Data

Calculating Watt Density

Watt density is the amount of wattage per square inch of heated area. To determine watt density, divide the total wattage by the heated area.

$$\text{Watt Density} = \frac{\text{Wattage}}{\text{Heated Area}}$$

To apply this equation, the heated area is the total contact surface of the heater less areas of no-heat found around terminals, mounting holes, etc.

Heated Area = Total Contact Area - No-Heat Area

To calculate the heated area:

1. Using the chart below, locate the **no-heat factor** corresponding to the type of heater being considered.
2. To use the formula below, insert the no-heat factors, length and width (in inches).

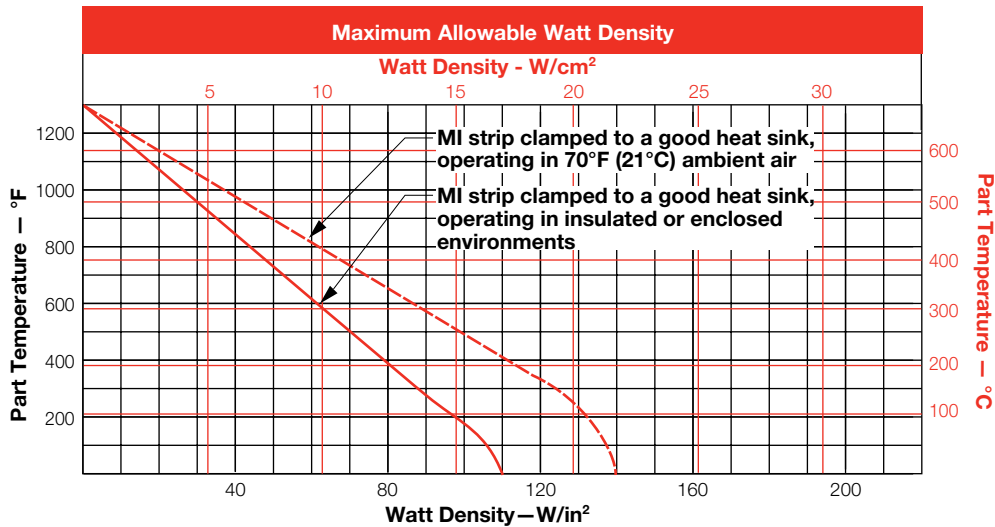

Heated Area = (Overall Length - No-Heat Factor) x Width

Type	No-Heat Factor (in.)
1 in. wide	
1 in. wide post terminal 1 on 1	1.75
1 in. wide post terminal 1 on 1 with mounting holes	3.00
For all other widths	
2 on 1 post terminal	1.18
2 on 1 with mounting holes	3.18

The drawings on the next page and the graph on this page will help in selecting the correct watt density for a particular application. First, refer to the drawings to determine the heated area of the heater. Then, use the

watt density formula and graph to ensure that the maximum watt density of the heater does not exceed the specific application requirements.

$$\text{Watt Density} = \frac{\text{Wattage}}{\text{Heated Area}}$$

Strip/Clamp-On Heaters

Mineral Insulated (MI) Strip Heaters

Applications and Technical Data (Continued)

Specifications

Width

- 1, 1½ and 2 in. (25, 38, 51 mm), tolerance $\pm 1/32$

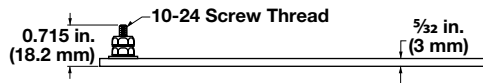

Length

- 8 to 30 in. (203 to 762 mm), tolerance $\pm 1/8$

Terminations

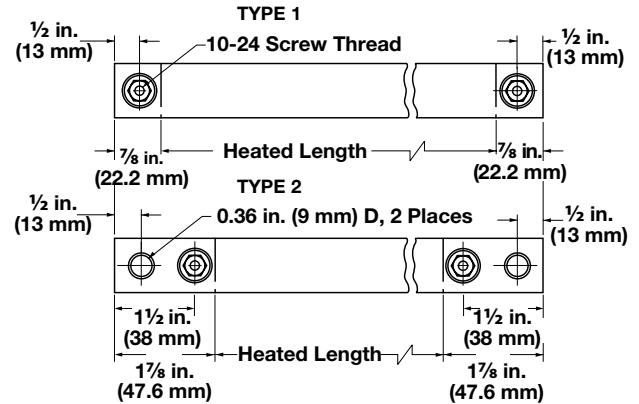

- 1 in. (25 mm) wide—post terminals one-on-one
1½ to 2 in. (38 to 51 mm)—post terminals two-on-one

All Widths

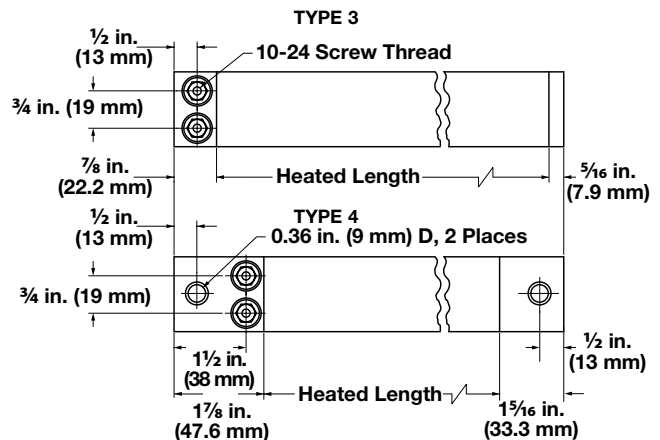

Note: In most applications, mounting holes alone do not provide adequate clamping. A clamp bar should be used for each 4 in. (102 mm) of heater length.

1 in. (25 mm) Wide

1½ in. – 2 in. (38 – 51 mm) Wide

Mineral Insulated (MI) Strip Heaters

Applications and Technical Data (Continued)

Options

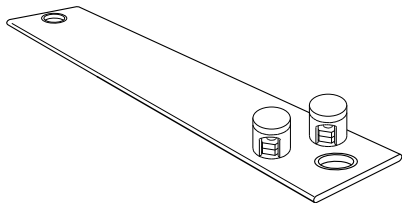

Thermocouple Pocket

A thermocouple pocket welded to the back surface accepts a 0.063 in. (1.6 mm) diameter thermocouple. This option provides accurate temperature sensing and easy thermocouple replacement. Thermocouple not included.

Accessories

Ceramic Terminal Covers

Ceramic terminal covers offer a convenient and economic method to insulate post terminals. They are sized for standard length posts with 10-24 screw thread size, supplied as an accessory item and shipped separately. Specify Z4918 and quantity.

Parallel Terminals Part Numbers—Type 3 and 4

Width in. (mm)	Length in. (mm)	Volts	Power (Watts)	Watt Density W/in ² (W/cm ²)	Approx. Net Wt. lbs (kg)	Type	Part Number

^① Denotes units with mounting holes. Mounting holes are 0.36 in. (9 mm) in diameter and are intended for use with 1/4 in. (6 mm) bolts.

Centers of mounting holes are located 1/2 in. (13 mm) from the ends of the heater.

Strip/Clamp-On Heaters

375 High-Temperature Strip Heaters

Named for its 0.375 in. (9.5 mm) thickness, the rugged Watlow 375 strip heater is capable of both high temperatures and high watt densities.

Watlow® begins construction by accurately placing a coiled, nickel-chromium element wire in the center of the heater. The element wire is then embedded in magnesium oxide (MgO)-based insulation compacted into a solid mass creating excellent heat conductivity and high dielectric strength. The heater is then enclosed in aluminized steel or 430 stainless steel sheathing.

Performance Capabilities

- Aluminized steel sheath temperatures up to 1100°F (595°C)
- 430 stainless steel sheath temperatures up to 1200°F (650°C)
- Watt densities up to 100 W/in² (15.5 W/cm²)
- UL® approved up to 240VAC (File No. E52951)
- CSA approved up to 480VAC (File No. LR7392)

Features and Benefits

Nickel-chromium element wire is centered in the heater

- Assures uniform heat

Aluminized steel sheath

- Operates at higher temperatures and resists corrosion better than iron-sheathed heaters
- Minimizes heat-up time

Optional 430 stainless steel sheath

- Meets temperature requirements that reach up to 1200°F (650°C)

Post terminals, welded to the element wire

- Produces strong, trouble-free connections

Rigid 3/8 in. (9.5 mm) thick design

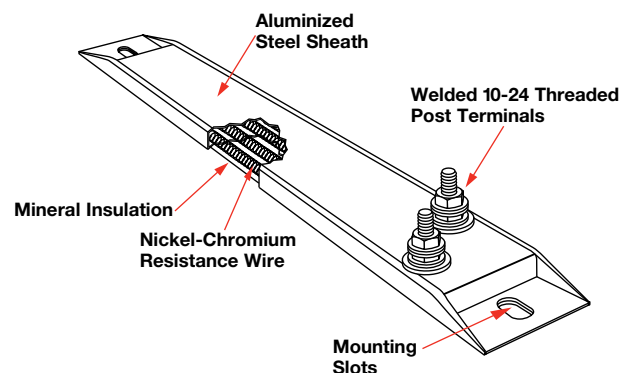

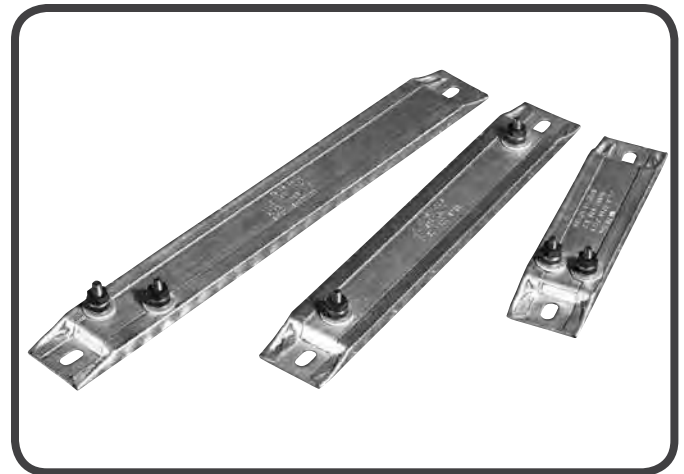

- Enables the heater to fit into many existing applications

Over 100 in-stock models in popular sizes and ratings

- Allows next day shipment

Available dimensions are 1 1/2 in. (38 mm) wide and 5 1/2 to 48 in. (140 to 1219 mm) long

- Fits a variety of application needs

Typical Applications

- Food warming
- Freeze and moisture protection
- Tank and platen heating
- Packaging
- Dies and mold heating
- Autoclaves
- Ovens
- Telecom

Strip/Clamp-On Heaters

375 High-Temperature Strip Heaters

Applications and Technical Data

Calculating Watt Density

Use the *Maximum Allowable Watt Density* graphs and formulas to ensure the allowable watt density for the heater does not exceed the specific application requirements. **Watt density is calculated for one side of the heater only.**

Formulas

$$\text{Watt Density} = \frac{\text{Wattage}}{\text{Heated Area}}$$

Heated Area

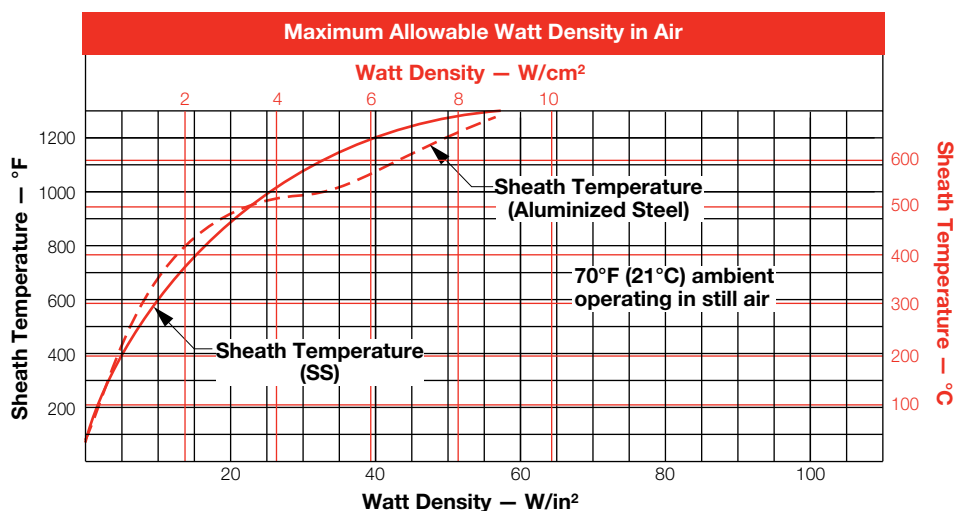

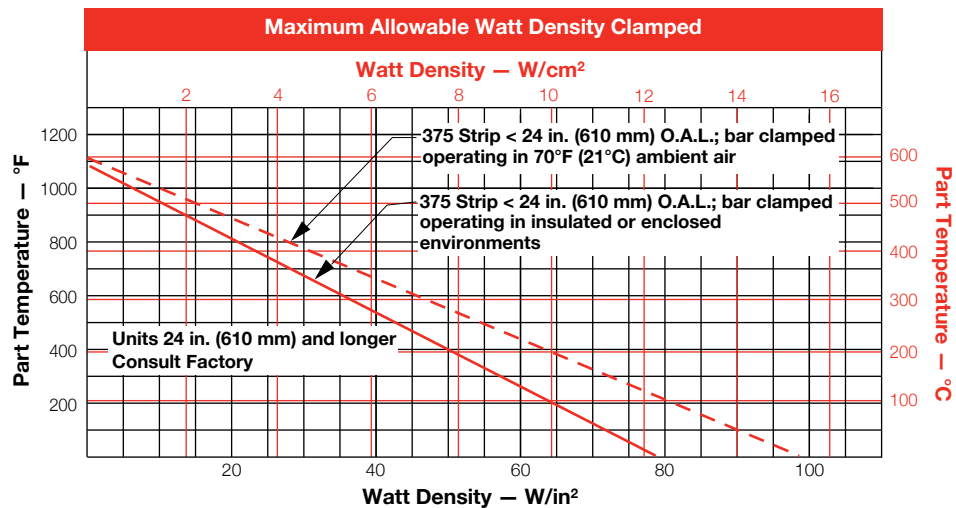

$$\begin{aligned} \text{(Offset Terminals)} &= [\text{Overall Length (A)} \times 1.5 \text{ in.}] - 6 \text{ in}^2 \\ &= [\text{Overall Length (A)} \times 38 \text{ mm}] - 38.7 \text{ cm}^2 \end{aligned}$$

Heated Area

$$\begin{aligned} \text{(Parallel Terminals)} &= [\text{Overall Length (A)} \times 1.5 \text{ in.}] - 4.7 \text{ in}^2 \\ &= [\text{Overall Length (A)} \times 38 \text{ mm}] - 30.3 \text{ cm}^2 \end{aligned}$$

Heated Area

$$\begin{aligned} \text{(One-on-One Terminals)} &= [\text{Overall Length (A)} \times 1.5 \text{ in.}] - 6 \text{ in}^2 \\ &= [\text{Overall Length (A)} \times 38 \text{ mm}] - 38.7 \text{ cm}^2 \end{aligned}$$

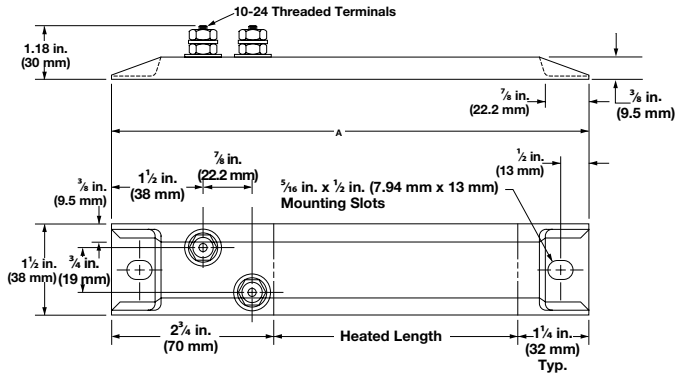

Strip/Clamp-On Heaters

375 High-Temperature Strip Heaters

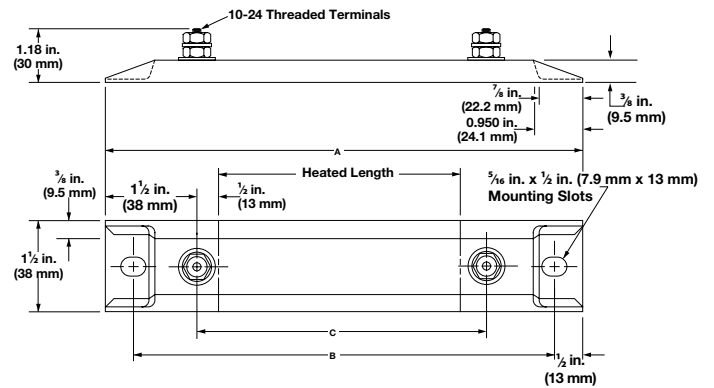

Termination Options

Offset Terminals

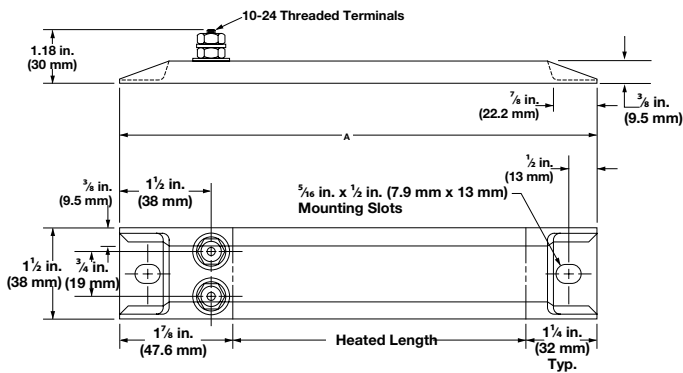

Two 10-24 threaded post terminals are offset from each other on the same end.

One-on-One Terminals

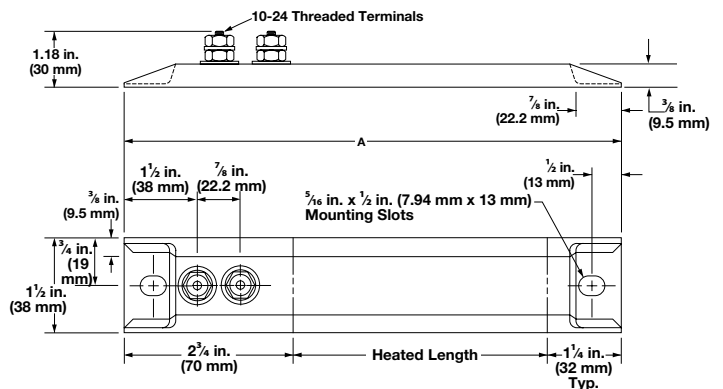

Two 10-24 threaded post terminals are placed one on each end.

Parallel Terminals

Two 10-24 threaded post terminals are used; both terminals on one end.

In-Line Terminals

Two 10-24 threaded post terminals are in-line with each other on the same end.

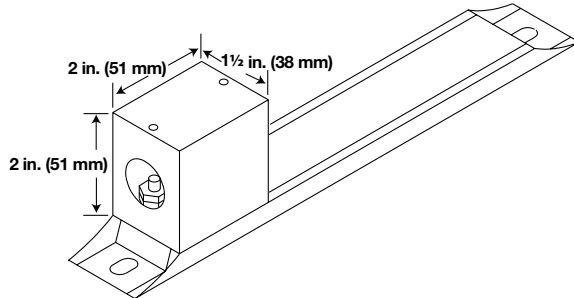

Strip/Clamp-On Heaters

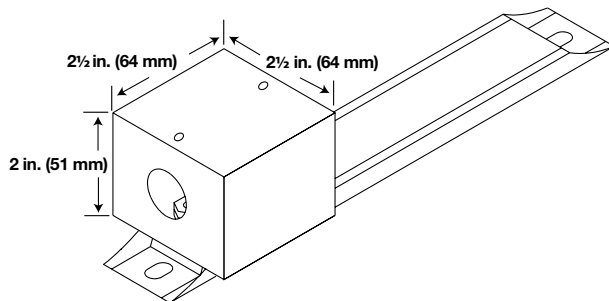

375 High-Temperature Strip Heaters

Termination Options (Continued)

Metallic Terminal Boxes - Variations

Available on in-line terminals only.

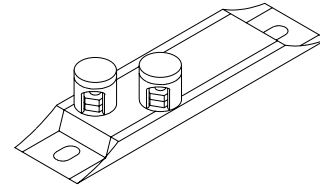

Available on offset terminals from stock and manufactured.

Metallic terminal boxes are available from stock on offset terminals. Terminal boxes act as a safety feature by covering the terminals. A conduit may be attached to the box through $\frac{7}{8}$ in. (22.2 mm) diameter holes in the ends of the box. To order, specify **terminal box**.

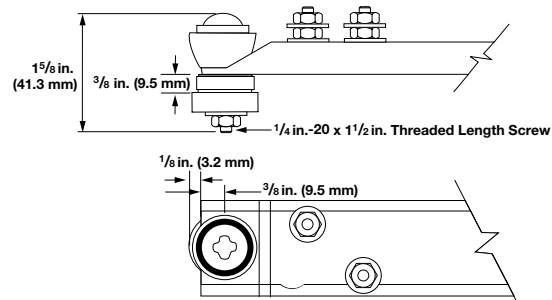

Accessories

Ceramic Terminal Covers

Ceramic terminal covers offer a convenient and economic method to insulate post terminals. They are sized for standard length posts with 10-24 screw thread size, supplied as an accessory item and shipped separately. Specify **Z4918** and quantity.

Secondary Insulation Bushings

Insulators are suitable when air heating and/or voltage to ground is a concern. A secondary insulation bushing kit, part number **Z5230**, contains one set of bushings for one heater. To accommodate bushings, $\frac{17}{32} \times \frac{11}{16}$ inch diameter mounting holes **must** be specified when ordering the heater.

CONTINUED

①Chromalox® and Wellman® part numbers are used as a cross reference to help select the equivalent Watlow part number. Chromalox® sizes 27 in. (686 mm) and longer, and all Wellman® sizes have mounting slot center to center distances 1/8 in. (3.2 mm) less than Watlow spacing.

Note: 5/16 in. x 1/2 in. (7.9 mm x 13 mm) mounting holes are supplied on all 375 strip heaters as standard, larger mounting holes may be provided 17/32 in. x 11/16 in. (13.5 mm x 17.5 mm).

Note that the Watlow part number specifies that the 375 strip heater includes an aluminized steel sheath. If a special sheath material is required, such as stainless steel, please contact your Watlow representative for material availability.

CONTINUED

①Chromalox® and Wellman® part numbers are used as a cross reference to help select the equivalent Watlow part number. Chromalox® sizes 27 in. (686 mm) and longer, and all Wellman® sizes have mounting slot center to center distances 1/8 in. (3.2 mm) less than Watlow spacing.

Note: 5/16 in. x 1/2 in. (7.9 mm x 13 mm) mounting holes are supplied on all 375 strip heaters as standard, larger mounting holes may be provided 17/32 in. x 11/16 in. (13.5 mm x 17.5 mm).

Note that the Watlow part number specifies that the 375 strip heater includes an aluminized steel sheath. If a special sheath material is required, such as stainless steel, please contact your Watlow representative for material availability.

Strip/Clamp-On Heaters

FIREBAR® Clamp-On Heaters

FIREBAR® heating elements provide added heating performance over standard round tubular heating elements—especially for immersion applications in petroleum based liquids requiring high kilowatts.

The FIREBAR's unique flat surface geometry packs more power in shorter elements and assemblies, along with a host of other performance improvements. These include:

- Minimizing coking and fluid degrading
- Enhancing the flow of fluid past the element's surface to carry heat from the sheath
- Improving heat transfer with a significantly larger boundary layer allowing much more liquid to flow up and across the sheath's surface

FIREBAR elements are available in single- and double-ended constructions with one inch or $\frac{5}{8}$ inch heights. These two configuration variables make it possible to use FIREBAR elements instead of round tubular elements in virtually all applications.

**For detailed product and technical data,
see the full FIREBAR product
section located on pages 84 through 102.**

Strip/Clamp-On Heaters

Thick Film Conduction Heaters

The Watlow 430 stainless steel thick film conduction heater is ideal for many applications where fast response and uniformity are essential. A clamp-on, thick film heater provides the best possible combination of heat transfer, thermal efficiency, temperature response and uniformity in a low profile package.

This high-performance heater can be used in areas where space is limited or where conventional heaters cannot be used due to limited voltage and wattage combinations.

Thick film conduction heaters provide a low profile in a variety of shapes including two-dimensional circular and rectangular forms. Direct contact of thick film heaters to surfaces ensures efficient heat transfer through thermally stable substrates and precise resistance trace patterns.

Performance Capabilities

- Maximum substrate temperature up to 1022°F (550°C). Contact your Watlow representative for applications over 842°F (450°C)
- Watt densities up to 75 W/in² (11.6 W/cm²)
- Voltages up to 240V

Features and Benefits

Watt densities up to 75 W/in² (11.6 W/cm²) for clamp-on applications

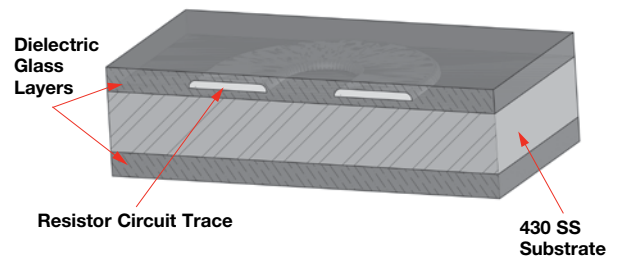

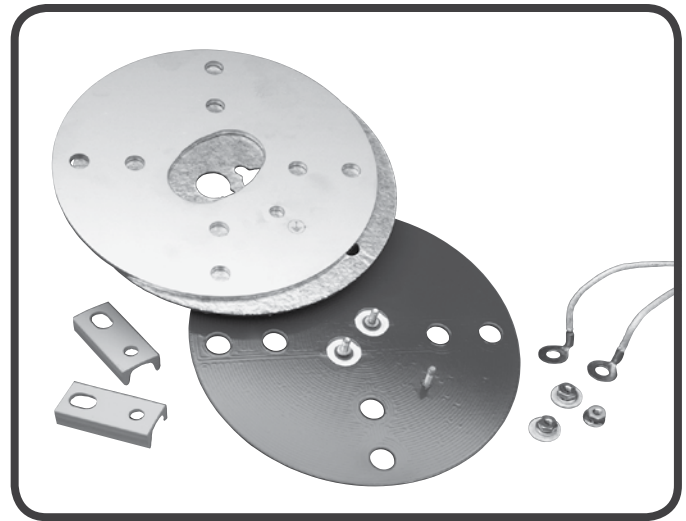

- Allows precise, repeatable wattage distribution and uniform temperature profile

Threaded stud termination

- Produces strong, trouble-free connections, see *Termination Assembly* drawing on page 454

Agency approvals

- UL® component recognition available upon request

Typical Applications

- Food warming cabinets
- Load dump resistors
- Seal bars
- Deposition chamber lids

**For detailed product and technical data,
see the full Thick Film Conduction product
section located on pages 453 through 456.**
