Introduction to Tote Tank/IBC Heaters

The contents in your tote tanks/intermediate bulk containers (IBCs), such as honey, molasses, or lube oil, can be slow moving and uncooperative when you need it most, especially when winter strikes. Heat allows the contents to flow at a manageable rate.

Applications:

- Viscosity control
- Freeze protection
- Temperature maintenance
- Melting of solids
- Heat-up tote tank/IBC contents to a required temperature
- Thermal mixing
